

# Release Notes (5/5/2015)

## New Features

- Individual Fish List
  - First attempt to remove the 1000 record limit. You can now filter all the fish in the database. We may do more to improve performance, but this is a good start.
  - I also (temporarily) removed the “Search” box that searched within the filtered record set. I think I’ll probably restore that, but only for sets that are a manageable size.

- Encounter List
  - I also removed the 1000 record limit here, with the same caveats as above.

- Studies – Began revisions. Added a description field, and a place to indicate the river mile start and river mile end of the study.

## Edit Black Rocks, Colorado River Study

### Organization Information

Name:

Code:

Description:

River mile start:

River mile end:

- Critical Habitats

- We now support the ability to assign multiple species to a critical habitat. As an example, the Deso and Gray Canyon critical habitat has the same range of river miles for both bonytail and humpback chub. This change affects the list of critical habitats, and the page where you insert/edit critical habitats.
- You can also add an optional, longer description of a critical habitat.

## Edit Rifle Bridge to North Wash

Required fields are indicated with an \* .

### Hydro Area Information

Name\*: Rifle Bridge to North Wash

Code:

Description:

Parent river\*: Colorado River

Type\*: Critical Habitat

Habitat for: Colorado pikeminnow   
razorback sucker

Add species: 

- None
- bluehead sucker
- bonytail chub
- flannelmouth sucker
- humpback chub**
- hybrid sucker
- roundtail chub
- unknown
- unknown gila

River mile start:

River mile end:

### Studies

Nothing to see here...still under construction. Eventually this will be a list of the studies working in this hydro area.

- Email functionality is now working! If you have website related questions, issues, or bugs to report, you can email us at [streams@colostate.edu](mailto:streams@colostate.edu). That address forwards to me and Amy at the moment, but can also go to the new database admin in the future. The contact page has been updated to reflect this change.
- You can now reset your password from the website. Simply click the "Forgot your password?" link on the Login page. The system will set your password to a random string and send you an encrypted email with your new password. Yay!

## Login to STReAMS

Email Address:

- Error checking and validation added to:
  - Hydro Areas - river miles must be numbers, start must be before end, and name, parent river, and type are all required fields.
  - Organizations – Name is required.
- Added page headings on all pages so it's harder to get "lost" in the website.

## Bug Fixes

- Lots of tweaks to inline help, shortening the tooltips and clarifying instructions.
