

STReaMS: Species Tagging, Research & Monitoring System

Monthly Webinar

8/25/2016

Amy Greenwell & Puja Gurung
Colorado Natural Heritage Program
Warner College of Natural Resources
Colorado State University
www.cnhp.colostate.edu

Ben Johnke
Research Software Facility
Colorado State University

WARNER COLLEGE OF
Natural Resources

Agenda

- Announcements
- Highlight a few new features – New Role, Navigating Tabs, Deployment Attributes for Tags
- QC tools
- Release Schedule
- Webinar Schedule

Roles

Role	Read	Write	Download	Query Builder	Examples
Registered User	Limited	None	Limited	None	Lay people, interested parties outside Recovery Program & Partners
Researcher	Full	Limited (None unless Data Lead on a Study)	Full	Full	Recovery Program & Partners personnel
Data Administrator	Full	Organization/Office level	Full	Full	Office Supervisors
Database Manager	Full	Full	Full	Full	CNHP, Core Users, Recover Program Database Manager

- Download files for Registered Users only include fields visible on the web pages
- Researchers can only edit data in their Study if they are a Data Lead
- Data Administrators can edit all data related to Studies associated with their Office

Quality Control Tools

- Check for duplicates
 - Stocking can be done during batch uploads (this is easy – we look at the tag code and make sure each tag code has only one stocking event)
 - Captures combine tag code, date, river, river mile
 - Transfers combine tag code, date, transferred from river, transfer to river, river mile
 - Detections combine tag code, date/time minute, array, antenna
- Merge records
 - DB Manager may need to merge two or more Individuals into one (ex. fixing a bad tag code)
- Change relationships
 - Change the Individual and Encounter is linked to (i.e. “splitting” Encounters) or changing a Study a Sample is linked to
- Check field attributes (ex. ranges for specific species, ranges for specific rivers, etc.)
- Search for ghost records
- Batch delete?
- Undo upload?

Releases

- We are just about ready for the next release (anticipated within the week)
 - This one has a LOT of changes
 - We'll send out a group email with release notes
- The following release will be much smaller (anticipate late September/early October)
 - Reformatted PIA/Array pages and List toggle
 - New Stocking Event section on Study page
 - Removal of the defunct Sampling Event
- After that, batch uploads will be released (anticipate December/January)
 - This will be a big item to explore at the March workshop
 - CNHP will batch upload 2015 rare fish and stocking data for the Programs. Some formatting needs to be tweaked due to new templates. We will also use these files to test the upload process.

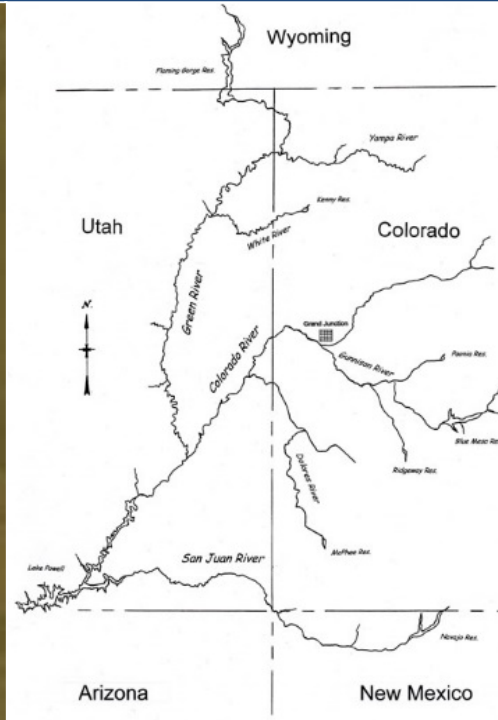

Webinar Schedule

We are down to larger features, day to day items are mostly resolved

- Upcoming Webinar Schedule Propose
 - November, 10th Wednesday Thursday
 - January, 3rd Thursday (right after Annual Researchers Meeting)
- STReaMS Workshop in March
- Reassess Webinar schedule after March
